# Derivatives of trig functions worksheet no chain rule

In the following discussion and solutions the derivative of a (X) function will be denoted by or H '(X). The following problems require the use of these six derivatives - basic trigonometry derivatives: these rules follow from the limit definition of derivative limits, special limits, trigonometry identity or the quotient rule. In the list of problems following, most problems are average and some are somewhat challenging. On problems 1.) Through 8.) Find answers without using the chain rule. Problem 1: Differentiate. Click here to see a detailed solution for the problem 1. Problem 2: Differentiate. Click here to see a detailed solution for the problem 2. Problem 3: Differentiate. Click here to see a detailed solution for the problem 3. Problem 4: Differentiate. Click here to see a detailed solution for the problem 4. Problem 5: Differentiate. Click here to see a detailed solution for the problem 5. Problem 6: Differentiate. Click here to see a detailed solution for the problem 6. Problem 7: Differentiate. Click here to see a detailed solution for the problem 7. Problem 8: currency. Click here to see a detailed solution for the problem 8. Some of the following problems require the use of the chain rule. Problem 9: Differentiate. Click here to see a detailed solution for the problem 9. Problem 10: Differentiate. Click here to see a detailed solution for the problem 10. Problem 11: Differentiate. Click here to see a detailed solution for the problem 11. Problem 12: Differentiate. Click here to see a detailed solution for the problem 12. Problem 13: Differentiate. Click here to see a detailed solution for the problem 13. Problem 14: Differentiate. Click here to see a detailed solution for the problem 14. Problem 15: Find an equation of the tangent line to the graph of  $X = -1$ . Click here to see a detailed solution for the problem 15. Problem 16: Find an equation of the line perpendicular to the AT chart. Click here to see a detailed solution to the problem 16. Problem 17: Suppose. Solve  $f'(x) = 0$  per  $x$  in the interval. Click here to see a detailed solution to the problem 17. Problem 18: Use any method to verify it. Click here to see a detailed solution for the problem 18. Click here to return to the original list of various types of calculation problems. Your comments and suggestions are welcome. Please e-mail Any correspondence to Duane Kouba Clicking on the following address: Kouba@math.ucdavis.edu Duane Kouba Sole 3 August 17:48:04 PDT 1997 The basic trigonometric functions include the following functions (6): Sine (left x right), coseno (left (so x), tangent (tan x right), cotongent (left (cradle x) ,) secantant (left x) and conscante (csc x right). All these functions are continuous and differentiative in their domains . Below we are a list of derivatives à €
